

Europis

Game Engine Programming Final
Riley B - Solo

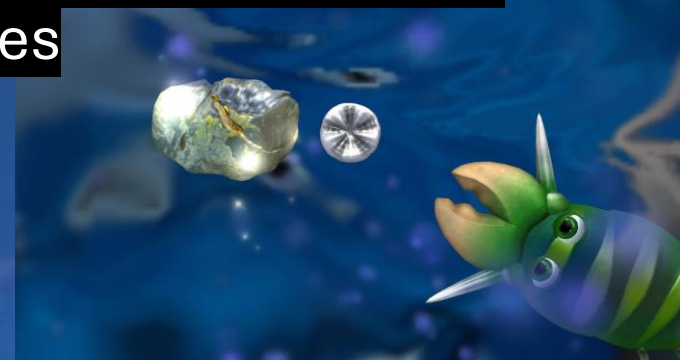

Gameplay

- Player is a tiny simple looking creature
- They will swim around a 2d environment collecting food to grow and items to evolve / upgrade themselves (simple automatic addons, not an in-depth character creator like Spore)
- Evade, hunt and fight other creatures with simple “collision combat” to earn as many points as you can

Rare power-ups or upgrades could be looted from certain enemy types

Objective

- Last as long as you can, collecting upgrades and making your own build by combining a small number of possible upgrades / abilities (like spikes for collision damage, poison cloud for AOE, or speed boosts for a snatch and grab style)
- Game ends when the player runs out of HP and dies
